

Comparison Between the Crack Areas for Different Fiber Contents

FIG. 1

Comparison of Length to Width Ratios of Cracks for Different Fiber Contents

FIG. 2

2/27

Comparison of Time of First Crack for Different Fiber Contents

Note: Slabs with 2% Fiber Content Did not Crack

FIG. 3

Comparison of Crack Areas between Control Slabs and Slabs With Fiber for Different Laboratory Batches

FIG. 4

+

3/27

Comparison of Crack Areas as a Percentage of Control for Different Fiber Contents

FIG. 5

Comparison of Crack Area Reduction for Different Fiber Contents

FIG. 6

+

First Crack Strength vs. Fiber Content

FIG. 7

+

5/27

Modulus of Rupture vs. Fiber Content

FIG. 8

+

First Crack Toughness vs. Fiber Content

FIG. 9

+

7/27

Toughness Indices vs. Fiber Content
FIG. 10

+

Japanese Toughness vs. Fiber Content

FIG. 11

+

Japanese Flexural Strength vs. Fiber Content

FIG. 12

+

Average Residual Strength vs. Fiber Content

FIG. 13

Number of Blows to First Crack and Failure vs. Fiber Content

Shotcrete Round Panel Testing - Mixture F10
Hybrid Synthetic Structural Fibre, 1.0% vol., Wet-Mix Shotcrete

FIG. 27

Shotcrete Round Panel Testing - Mixture F15
Hybrid Synthetic Structural Fibre, 1.5% vol., Wet-Mix Shotcrete

FIG. 28

Shotcrete Round Panel Testing - Mixture F20
Hybrid Synthetic Structural Fibre, 1.9% vol., Wet-Mix Shotcrete
